ECSC502 Advanced Client-side Web Development
Tutorial 1

Objective: At the end of Tutorial 1 you should have an "about" page for your personal Web site

1- Think about how you would like to organize your About page
2- Look at the Lecture 1 slides, and identify the HTML5 tags that would be useful for your page
3- On paper, do a quick sketch of your page, and identify which HTML5 tags you will use so that the page is semantically correctly represented (e.g., <article>, <header>, <footer>).
4- Use a text editor (e.g. Dreamweaver in Code mode) to start coding your page. Do not worry about the styling of the page. This will be done in a separate tutorial.
5- Try validating your page as HTML5 here: http://validator.w3.org/

Note: you may discuss steps 1-3 with a partner.
